CONTENT: Net weight 14.8 OZ (420 G)

THE HEART OF ZEAL: STABILIZED RICE BRAN

Rice bran is one of the most nutrient-dense, yet underutilized food sources available on the market. It is a byproduct of rice production (rice milling) and is often discarded as waste because it's highly unstable and goes rancid very quickly. Thanks to advancements in food technology, wasting nutrient-rich byproducts is a problem of the past – today rice bran can be upcycled through a process called extrusion. Through this process, rice bran is stabilized to retain all its key micronutrients.

The rice bran in Zeal is in a unique, stabilized and water-soluble form, allowing its use in our all-in-one drink mix where it contributes a multitude of vitamins, minerals and other nutritional elements that can help nourish and support the body*. It is a unique natural food source that contains not only essential vitamins and minerals, but also polyunsaturated fatty acids, both soluble and insoluble fiber, along with protein and choline.

ZEAL'S PROPRIETARY BLEND

Zeal's proprietary blend contains a wide range of nutritional elements including:

Complex Carbohydrates

The complex carbohydrates in rice bran have a low glycemic index and may support steady blood sugar levels that are already at a normal range* while providing a source of slow-releasing energy.

Insoluble and Soluble Fiber

Insoluble fiber helps support a healthy digestive system*. Soluble fiber can support already healthy cholesterol levels*.

Carotenoids

A plant form of vitamin A that can support your immune system* and play an important role in vision*.

Phytosterols

May also support already healthy cholesterol levels*.

Tocopherols (T)

Like alpha, beta, gamma and delta, are forms of vitamin E that act as key antioxidants and play numerous roles in staying healthy.

IMPROVED OVERALL MOOD

Consuming two servings of ZEAL per day may help support overall mood¹.*

ENERGY & VIGOR

Results from an independent clinical trial¹ show that, by consuming two servings of Zeal daily, participants reported improvements in energy and vigor, including a 23% increase in self-reported vigor¹.*
